

AQUA GUARD

HIGH GLOBAL DEMAND FOR RBS TRITON™ TECHNOLOGY

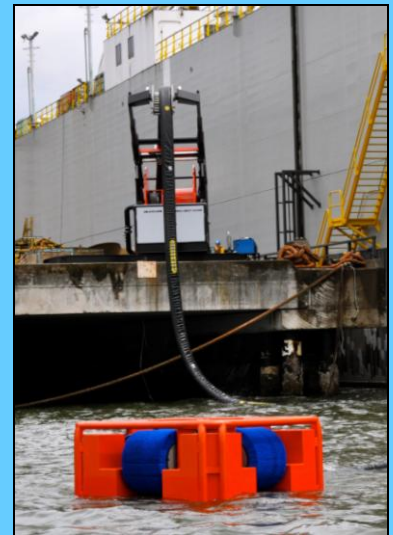

HIGH GLOBAL DEMAND FOR AQUA-GUARD'S RBS TRITON™ OFFSHORE OIL SKIMMING SYSTEMS

Over the past year, Aqua-Guard has provided multiple international clients with large RBS TRITON™ (URO) 300 & 600 state-of-the-art offshore oil skimming systems.

"We are delighted by the response from our client base. Our clients have become more aware that the requirement to recover higher volumes of oil as opposed to a high volumes of liquid (water and oil), is imperative. This is what our patented RBS TRITON™ technology can offer to our customers".

- Cameron Janz, Chief Operations Officer

**RBS TRITON™ (URO) 600 Oil Skimming System
Destined for Asia**

Advantages of the RBS TRITON™ (URO) systems over conventional offshore systems:

- Reduced **response time** (system is ready to operate immediately as no additional setup is required).
- Increased **safety** for the operators.
- Reduced **storage space** on vessels of opportunity (all components are stored and operated from the 20' ISO standard platform).
- Only **one** skimmer head is required to recover all viscosities of oil (patented RBS TRITON™ technology).

AQUA-GUARD

AQUA-GUARD RESPONDS

During the summer of 2010, Aqua-Guard was contracted by BP Exploration & Production and several OSROs to mobilize both personnel and equipment to assist in the response efforts to the Deepwater Horizon oil spill in the Gulf of Mexico. With the help of expert staff and locally hired personnel, Aqua-Guard, supplied and/or installed more than 100 oil skimming systems on local barges and vessels of opportunity. We would like to thank our staff, clients and local personnel that worked around the clock, 7 days a week, to help Aqua-Guard's response efforts.

During the first six months of 2011, Aqua-Guard has responded to several other oil spills in areas such as Northern Alberta (which was the largest spill of its kind in Canadian history) and several major spills in Central and South America.

AQUA-GUARD EXHIBITS

Aqua-Guard exhibited at both the **Clean Gulf Conference and Trade Show** in Tampa, Florida this past October and also at the **International Oil Spill Conference and Trade Show** in Portland, Oregon this May.

We were pleased to meet with agents, customers and old acquaintances at both these shows where we could discuss face to face their oil spill response needs.

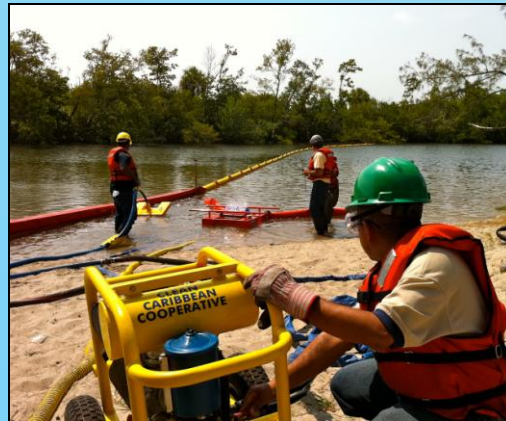

For more information on Aqua-Guard's RBS TRITON™ oil skimming systems, please contact:

Ron Bowden
International Sales Manager
ronb@aquaguard.com

Aqua-Guard responds to multiple oil spills with equipment and service from northern Canada to the jungles of Central and South America.

Aqua-Guard took part in several oil spill response training sessions in the U.S.A. and Latin America over the past several months. Aqua-Guard continues to work closely with its partners and customers.
